SUMMARY

Final-year B.Tech CSE student who builds full-stack products end to end: React and TypeScript on the front, Node.js and PostgreSQL on the back, with LLM features where they solve a real problem. Currently working on a GST compliance SaaS and a procurement app for restaurants.

EXPERIENCE

Intern, Repeat AI | Jul 2026 – Present
B2B procurement app for restaurants and cloud kitchens

- Main contributor to the buyer and vendor apps (React Native, TypeScript, Node.js): 70+ commits and 6 merged PRs.
- Built the WhatsApp ordering bot: PAN registration, voice replies, cart reconciliation, UPI payments and delivery notifications.
- Wrote a WebSocket gateway that keeps order status, chat and driver dispatch in sync between the buyer and vendor apps.
- Parsed vendor rate cards from photos and PDFs into inventory using Mistral OCR, with Gemini as fallback.
- Closed checkout launch blockers: server-side price recalculation so the client can't tamper with totals, plus token refresh, phone OTP validation and role guards.
- Wrote the technical architecture (knowledge layer, negotiation engine) and worked with the founders on MVP scope and vendor onboarding.

Student Intern, EduSkills Foundation (Google for Developers) | Remote, Jul – Sep 2025

- Completed the Google AI/ML curriculum and built projects on Google Cloud AI services through REST APIs.

Student Intern, CSRBOX | Remote, Jul – Aug 2025

- Worked on AI-driven research tasks for NGO projects.

PROJECTS

KhataGST | GST filing and ITC reconciliation for Indian MSMEs, Mar 2026 – Present | GitHub
React, TypeScript, Fastify, PostgreSQL (pgvector), Gemini API, AWS S3, Railway

- Gemini Vision turns photos and PDFs of invoices into structured records (GSTIN, tax split, party details), validated on both client and server.
- GSTR-1 and GSTR-3B are computed in plain deterministic code using integer paise instead of floats, with Excel/CSV export.
- RAG over the CGST/SGST Acts and CBIC circulars (pgvector) so answers point to the exact section.
- Role-based access (Owner, Admin, CA), audit trail, phone OTP + JWT login, rate limiting.

Smart Interview Assistant | Resume analysis and mock interviews | GitHub | Live demo
Next.js, TypeScript, Node.js, Express, Recharts, Vercel

- Resume analyzer that scores keywords, quantified results, formatting and fit for the target role.
- Reads a job description and builds mock interview questions around it, with rubric-based feedback after each answer.

PromptGuard AI | Prompt injection firewall for LLM apps | GitHub
Node.js, Express, TypeScript

- Proxy that checks every prompt before it reaches the model: text normalization, regex heuristics, a semantic classifier, then a risk score.
- Targets prompt injection, system prompt extraction, roleplay jailbreaks and delimiter tricks from the OWASP LLM Top 10; includes an audit-log dashboard.

SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL
Frontend: React, Next.js, React Native, Tailwind CSS, HTML, CSS
Backend: Node.js, Fastify, Express, REST APIs, WebSockets, JWT and OTP auth
Data: PostgreSQL, pgvector, Prisma, Supabase
AI: Gemini and OpenAI APIs, RAG, structured extraction, prompt design, Ollama, LangChain
Tools: Git, GitHub Actions, Docker, Railway, Vercel, AWS S3

EDUCATION

Galgotias University, Greater Noida | B.Tech, Computer Science & Engineering, Oct 2023 – Jun 2027

Rajdeo Singh College, Siwan | Class XII (70%), 2022

ACHIEVEMENTS

- Smart India Hackathon 2025 qualifier: cattle breed recognition with a CNN, 87% accuracy.
- HackWithInfy 2025: qualified for Round 2.
- 150+ LeetCode problems solved in Java (DP, graphs, trees, sliding window).
- Google AI/ML Virtual Internship, GDG (Aug 2025).
